## Nissan Qashqai!

### Crossover with the additional feature tuning by ELIA

Crossover describes the combination of features of different vehicle concepts. For the ELIA-team around executive designer Hans-Peter Walbrun, this was enough of a challenge in order to add another feature to the successful crossover model Nissan Quashqai – a dynamic modification by professional tuning.

Dominant 20-inch wheels in luxury class format, the six-piece design kit „Adventure“, the optimization of the undercarriage with a 35 mm height-adjustment effect as well as a 4-pipe sport exhaust system with a sonorous sound characterize the ELIA-version of the Quashqai. Needless to say that the stainless steel front bar which is optionally available in addition to the design kit was constructed and certified according to the EC directive on pedestrian protection and will be delivered with EC-approval.

For the two diesel versions, ELIA offers a performance and torque optimization which, due to its modified torque curve, even enables a reduced consumption – depending on the driving manner.
