The new Twingo:

More attractive with Tuning by ELIA!

The new Twingo surely is very functional, but its predecessor had much more originality.

This fact was a challenge for the team of ELIA and its chief-designer Hans-Peter Walbrun; they developed a complete conversion kit that makes the new Renault not only look more "grown up" but also very smart. The kit is deliverable punctually to the market launch of the new Twingo at Germany. Together with 17"-wheels, a lowering and a sports exhaust with a pithy sound, the kit will be available for less than 3.000 Euro.

And there is another surprise for the new Twingo:

Already end of 2007 ELIA will be able to deliver a flexfuel-conversion - at first for the 1,2 l turbo-engine. This allows to fill up the Twingo optionally with Co2-neutral ethanol or with customarily petrol. Thus the Twingo will not only be very environmentally compatible but also get an uprating of about 15%!

ELIA is developing the bioethanole project together with Biofuel24 (www.biofuel24.de), which hails from Bodenwerder, Germany. The Biofuel24 GmbH & Co. KG is the worldwide first filling station chain that is refitting diesel vehicles to vegetable oil and gasoline-driven cars to gas or bioethanole (E85). At the same time, Biofuel24 offers a comprehensive franchise concept for filling stations and car dealerships.
